OPTO ENGINEERING

High resolution multi mirror system for 1"sensors, C-mount

KEY ADVANTAGES

90° lateral imaging
the 4 orthonormal views allow visualization of object features that are hidden when looked at from the top

Long and thin object inspection
the characteristic aspect ratio of the four image segments perfectly fits long and thin objects

Built-in illumination
the device also incorporates two different light sources, for back and direct illumination

Suitable for measurement
the telecentric optics makes this module perfect for any multiple-measurement application.

TCCAGE is an integrated optomechanical system designed to fully inspect and measure parts from the side without any need of rotation. Four orthonormal views of an object are provided by a bitelecentric lens through an array of mirrors.

WORKING PRINCIPLE AND ADDITIONAL INFO
The four views are equally spaced by 90° and partially overlapped, obtaining complete coverage of the object lateral surfaces.
TCCAGE is provided with an extra port placed right above the object. This port can be used to inspect the top of the part using an additional lens and camera system.
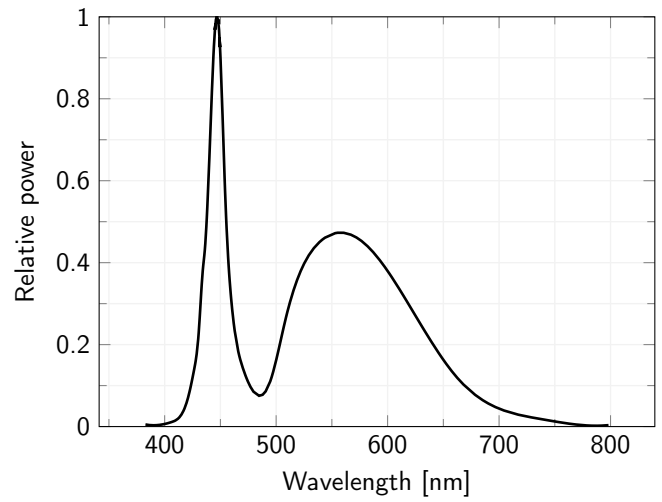

TCCAGE series integrates both direct and backlight illumination.
